- Technological fit
- Financial integration
- Web Enabled reports
- Tracking in-line quality
- MIS reports at Mid and Senior Management level
- Business Analytics for optimizing decision making
- Alerts System

APPS™

Introduction

APPS™ - Manufacturing is a full-fledged ERP application that covers all the activities that take place in an appare/made-ups/textile/leather manufacturing company. It tracks the entire life cycle of the product development right from design conceptualization to order fulfillment.

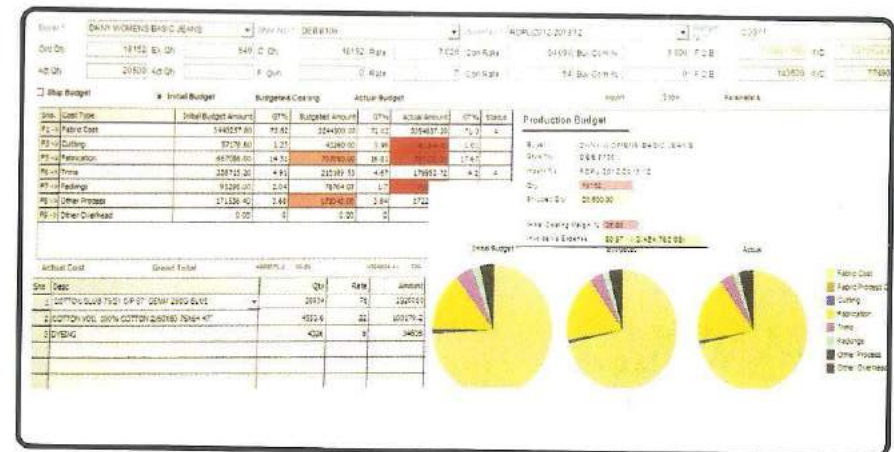

APPS-Value Proposition

What really sets APPS™ apart from all other software solutions is the fact that it has been designed specifically for the appare/madeups/ textile/leather industry. With our team of people who have worked in this industry for many years, we have studies in detail from an insider's perspective on the problems that companies in this industry face and have come up with unique and practical solutions.

The superior design means that expensive "customization" and "implementation" is minimized. Companies can quickly deploy the application of the cost of any other ERP. Where most ERPs take years to implement - APPS™ customers are up and running with the application within a matter of weeks! Which means that the payback period is a fraction of that of any other ERP!

"Where most ERPs take years to implement APPS™ customers are up and running with the application within a matter of weeks"
